

NUTR 119: Fall 2025
Review Sheet for Exam 2

The exam is 50 questions, all multiple choice except for 4 questions (True/False). Each question is worth 2 points and the exam is out of 100 points.

This review sheet contains many, but not all, of the topics covered. You are still responsible for other items reviewed in the presentations (but not those that are only covered in the textbook).

Concepts

- Compare and contrast the water content of different foods and beverages
- Understand the factors that increase and decrease iron absorption
- Identify the roles of proteins in the body and sources of protein in the diet
- Know the circumstances that increase and decrease the demand for protein in the diet
- Know the RDA for protein in adults
- Understand the functions of iodine, vitamin C, vitamin D, vitamin E, vitamin K, and water
- Be able to identify sources of vitamin C, vitamin K, and beta-carotene
- Know the consequences of excessive beta-carotene intake
- Identify strategies for preserving the vitamin content of foods when cooking
- Know the different vitamin deficiency disorders (i.e. pellagra, beriberi, and osteomalacia)
- Know the consequences of iron deficiency
- Identify one vitamin and one mineral that is not considered to be an essential nutrient

Practice Questions

What is not a characteristic of water-soluble vitamins?

- a. There is a low risk of toxicity
- b. Many play a role in energy metabolism
- c. They are absorbed directly into the bloodstream
- d. They are all stored well in the body

Which B vitamin is especially important for a female of childbearing age to prevent neural tube defects for their newborn?

- a. Vitamin B12
